AI Writing Self-Check: Quick Manual

Nov 5, 2026

What it does

This skill estimates how much of an English document looks AI-written, and shows what to fix. It is not a Turnitin product and cannot predict your Turnitin score.

Get started

1. In Claude, go to **Customize > Skills** and click **+**.
2. Choose **+ Create skill**, then **Upload a skill**, and upload the ZIP without unzipping it.
3. Attach a .docx, .pdf, .txt or .rtf file to a new chat.
4. Type: `/ai-writing-self-check Check this document for AI.`
5. Open the report. The HTML version has clickable highlights.

Read your score

Your score is the share of checked words that were flagged.

- **0%:** nothing was flagged, which does not prove the text is human-written.
- **1–19%:** low, but not proof of human writing. Turnitin shows this as *%.
- **20–100%:** more text was flagged. Start with the biggest passages.

Cyan looks AI-written. Purple looks AI-written, then reworded. Neither is proof.

Fix flagged text

- **Rewrite it yourself** from your own notes, data and sources.
- **Avoid shortcuts:** Turnitin looks for paraphrasers and humanisers.
- **If you used AI:** follow your institution's or journal's rules on declaring it.
- **If you did not:** keep your drafts and notes. Honest writing can be flagged too.

Limits and common problems

- **Accuracy:** not measured. It may miss AI text, including Claude's.
- **No score:** it needs 300 to 30,000 checked words in English.
- **Scanned PDF:** ask Claude to run OCR. Plagiarism is not checked.
